

# Oxalis

## Is Oxalis for you ?

- Are you using data logging systems or SCADA softwares ?
- Do you manage HDA (Historical Data Access) OPC servers ?
- Do you need real-time graphics ?
- Do you have no time to waste reading 150 pages of software manuals ?
- Is your budget getting low ?

If you feel concerned by these questions, Oxalis is made for you.

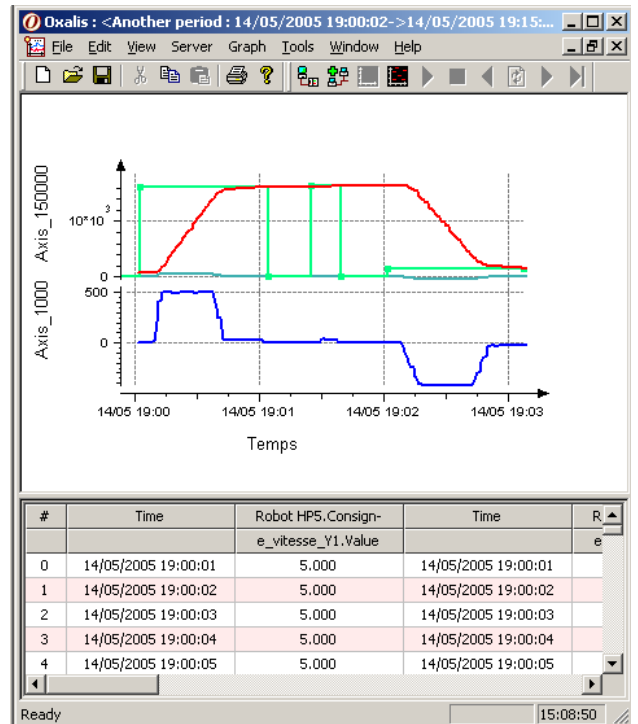

## What is Oxalis ?

### Oxalis is a HDA Client graphical software

The idea is to deliver a HDA client that is:

- really low cost
- extremely easy to use
- compatible with most HDA OPC servers

In a few clic anyone can generate top quality graphics which can be saved as simple .xml documents for further analysis or viewing.

## Main features

- Oxalis offers features that are absent from much more expensive HDA clients:
- unlimited number of axis on each graphic sides
  - fully configurable properties of waves and axis (markers, colors, ticks, etc.)
  - zoom in and zoom out
  - automatic or manual scaling
  - data grid in each view
  - display of point coordinates if close to the mouse cursor
  - highlight of a point in the graphic if selected in the data grid
  - period displayed can be changed with a simple click
  - automatic refresh of all views
  - free version for viewing and modifying documents generated by a licensed version
